1. The following guidelines illustrate the preferred layout for the specification of a utility application. These guidelines are suggested for the applicant's use.

#### **Arrangement of the Specification**

As provided in 37 CFR 1.77(b), the specification of a utility application should include the following sections in order. Each of the lettered items should appear in upper case, without underlining or bold type, as a section heading. If no text follows the section heading, the phrase "Not Applicable" should follow the section heading:

- (a) TITLE OF THE INVENTION.
- (b) CROSS-REFERENCE TO RELATED APPLICATIONS.
- (c) STATEMENT REGARDING FEDERALLY SPONSORED RESEARCH OR DEVELOPMENT.
- (d) THE NAMES OF THE PARTIES TO A JOINT RESEARCH AGREEMENT.
- (e) INCORPORATION-BY-REFERENCE OF MATERIAL SUBMITTED ON A COMPACT DISC.
- (f) BACKGROUND OF THE INVENTION.
  - (1) Field of the Invention.
  - (2) Description of Related Art including information disclosed under 37 CFR 1.97 and 1.98.
- (g) BRIEF SUMMARY OF THE INVENTION.
- (h) BRIEF DESCRIPTION OF THE SEVERAL VIEWS OF THE DRAWING(S).
- (i) DETAILED DESCRIPTION OF THE INVENTION.
- (j) CLAIM OR CLAIMS (commencing on a separate sheet).
- (k) ABSTRACT OF THE DISCLOSURE (commencing on a separate sheet).
- (l) SEQUENCE LISTING (See MPEP § 2424 and 37 CFR 1.821-1.825. A "Sequence Listing" is required on paper if the application discloses a nucleotide or amino acid sequence as defined in 37 CFR 1.821(a) and if the required "Sequence Listing" is not submitted as an electronic document on compact disc).

2. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the at least a first Fibre Channel device and at least a second Fibre Channel device as in claims 1 and 16 must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

The drawings are further objected to because all blocks in Figures 1-3, 4A, 4B, 5, 7-9 should be labeled with descriptive legends known in the art.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

3. Claims 1-30 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 1, it is confusing for reciting "a first buffer", "a second buffer", "a first bypass buffer", and "a second bypass buffer" since each buffer is operated to store data received at either first port or second port. Do the first buffer and first bypass buffer and the second buffer and second bypass buffer receive same data respectively?

Lines 5 and 7, it is confusing for reciting "at least a first Fibre Channel device" and "at least a second Fibre Channel device". Are they referring to the same first Fibre Channel device and same second Fibre Channel device as in lines 1 and 2?

Lines 25-26, it is confusing for reciting "whereby a said second Fibre Channel device can operate at said second physical link rate which is higher than said first physical link rate of a said first Fibre Channel device" since the second Fibre Channel device always operates at second physical link rate which is higher than the first physical link rate of a said first Fibre Channel device as indicated in the preamble. Can the second Fibre Channel device operates at rate other than the second physical link rate?

Line 27, it is also confusing for reciting "data words" since it is the "data" to be received and stored as in lines 9, 13, 17 and 21.

In claim 3, line 2, the term of "LISM", "LIFA", "LIPA", "LIHA" and "LISA" should be defined as to what it stands for at its first occurrence.

In claim 6, line 2, claim 7, line 3, the term of "ARB" should be defined as to what it stands for at its first occurrence.

In claim 13, line 2, "R\_RDY" should be defined as to what it stands for at its first occurrence.

Claims 16, 18, 21 and 28 are rejected for the same reasoning as in claims 1, 3, 6 and 13.

4. In view of the 112 2<sup>nd</sup> paragraph problems indicated above, no prior art rejection or allowable subject matter can be applied at this time.

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

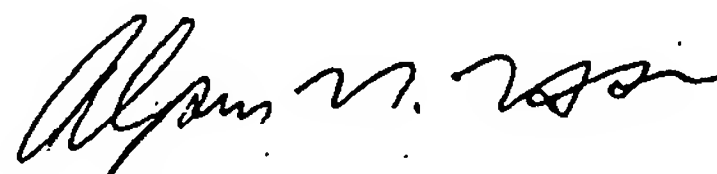

Book '481, Banks '813 & '646, Berman '203, '007, '053 & '914, Hagglund et al., Polan et al., and Martin et al. are all cited to show the common feature of Fibre Channel switching system utilizing switch fabric, ports, buffers, and controller for routing data frames from source to destination similar to the claimed invention.
